3. Protection from preventable childhood diseases and injuries

Children should NOT only be taken to the clinic when they are ill. You should also take your child for their full course of immunisations/vaccines and routine treatments according to the timetables on pages 27 and 28.

- Immunisations are free. They protect your baby from common childhood illnesses and disease. Make sure your baby gets all his or her immunisations.
- Go to the clinic for your follow-up visits for you and your baby within six days of birth and at six weeks.
- Make sure that you know when your baby needs to return to the clinic for immunisations or other care. If you miss the date for your clinic visit, make sure that you return as soon as possible.
- If you are HIV positive, get your baby tested for HIV at birth and at 10 weeks.
- All children between 6 months and five years should receive Vitamin A and deworming medicines every six months. This helps to keep them healthy.
- Remember to wash your hands after using the toilet, changing nappies, preparing meals and before feeding children. Wash your hands properly - wash both sides of your hands, between your fingers and your wrists with soap and clean water.
- Many serious injuries can be prevented if parents and other caregivers supervise young children carefully and keep their environment safe.
- A child should not be left unattended or unsupervised. Make sure that there is always a responsible adult taking care of your child and that you know where your child is at all times.
- Protect yourself too. Decide on a contraceptive method of choice and also use male or female condoms to prevent both unplanned pregnancy and sexually transmitted infections (dual protection).
- Good oral health will keep your child's teeth healthy and strong and prevent unnecessary pain and discomfort.

9 years and older	HPV2					
7 months	Measles booster	left thigh	2501121		05/01/2023	[Signature]

For Health Workers...

- Remember that every visit to the health facility is a chance to provide preventive health services and health promotion.
- Check the child's nutritional status and whether any immunisation or treatment is due.
- Show the caregiver proper hand washing.
- Always give the caregiver a date for their baby's next visit to the clinic.
- Remember to urgently notify your EPI co-ordinator of any cases of Acute Flaccid Paralysis (AFP) or suspected measles, as well as adverse events after immunisation (excluding mild fever and minor local reactions).
